DIGITAL LITERACY PROJECT REPORT

Name: Tanisha Mohan
Registration Number: 25BOE10054
Branch: Bioengineering
Year: 1st Year B.Tech
Course Code: CSE0001
Date: 31-03-2026

INTRODUCTION

The Digital Literacy Project is designed to help students understand and apply essential digital skills required in today's world. As a Student Digital Ambassador, the objective of this project is to create awareness about responsible and effective use of digital tools and platforms. This project includes various tasks such as creating an infographic, building a digital portfolio, exploring online platforms, understanding email etiquette, and learning about cybercrime awareness. Each task contributes to developing a strong digital presence and improving online communication skills. Through this project, I gained practical experience in using digital tools and understood the importance of maintaining professionalism and safety in the digital environment.

TASK 1 WRITE-UP

I created my Digital Literacy Awareness infographic using Canva, which is a user-friendly design tool with various templates and visual elements. My design explains the concept of digital literacy and highlights its importance for students. It includes key sections such as safe internet practices, professional online presence, useful digital tools, and email etiquette. I used simple language, icons, and structured layouts to make the content visually appealing and easy to understand.

While creating the infographic, I found it interesting to experiment with different layouts and colour combinations. One challenge I faced was presenting all the important information on a single page without making it look overcrowded. This task helped me improve my creativity and design skills. It also increased my awareness about responsible digital behaviour and how to effectively communicate information through visuals.

TASK 2 WRITE-UP

In this task, I created my student digital portfolio by setting up profiles on GitHub, LinkedIn, and ResearchGate. GitHub is used to store and manage projects, LinkedIn helps in building a professional network and showcasing achievements, and ResearchGate is used for exploring academic research and publications. I updated my profiles with basic academic details such as my branch, year, and areas of interest.

This task helped me understand the importance of maintaining a professional online presence. These platforms serve as a digital identity and are useful for internships, placements, and academic growth. Over the next four years, I plan to regularly update my GitHub with projects, improve my LinkedIn profile by adding skills and certifications, and explore research opportunities on ResearchGate. This task was an important step toward building a strong digital portfolio.

TASK 3 WRITE-UP

In this task, I explored coding and collaboration platforms. I created an account on a coding platform and completed a beginner-level challenge, which helped me understand basic problem-solving and coding concepts. This experience improved my logical thinking and introduced me to the practical application of programming skills.

Additionally, I created a Google Form as a Digital Literacy Awareness Quiz with five questions, including both multiple-choice and short-answer types. I also linked it to a Google Sheet to view responses. This helped me understand how online tools can be used for data collection and collaboration.

Overall, this task was useful in developing my technical skills and understanding how digital platforms can support academic learning and teamwork.

TASK 4 WRITE-UP

In this task, I learned about professional communication through email etiquette and responsible social media usage. I wrote two formal emails—one requesting an assignment extension and another applying for an internship. This helped me understand the importance of tone, structure, and clarity in professional communication.

A situation where poor digital communication can cause problems is when a student sends an email without a proper subject or uses informal language. This may create a negative impression on the recipient. Such situations can be avoided by following proper email etiquette, maintaining professionalism, and reviewing the message before sending. This task helped me improve my communication skills.

TASK 5 WRITE-UP

While researching cybercrime, I learned about different types of online threats, such as phishing and online fraud. I was surprised to see how easily people can become victims of cybercrime due to a lack of awareness. These crimes often target students and individuals who are not cautious while sharing personal information online.

One important habit I will change is being more careful while clicking links and sharing sensitive information. I will also ensure that I use strong passwords and enable security features like two-factor authentication. This task increased my awareness about online safety and the importance of being cautious in the digital world.

CONCLUSION

This project helped me understand the importance of digital literacy in academic and professional life. Through various tasks, I learned how to use digital tools effectively, maintain a professional online presence, and communicate responsibly. It also increased my awareness about cyber safety and ethical online behaviour. Overall, this project was a valuable learning experience that will help me in my future studies and career.
